

Manage eScripts from Active Script List (ASL)

Register a patient for ASL & dispense an eScript from ASL

STEP 1

Register patient for ASL

Use Minfos to register a patient and send a request to access their ASL and to upload all active scripts to their ASL

Note: Request can be email or a SMS

STEP 2

Patient activates their ASL

Patient consents to give pharmacist access to their ASL and for scripts to be uploaded to their ASL

Note: Patient can give one-time or ongoing access to their ASL

STEP 3

Request eScript to be filled

The patient asks the pharmacy to fill a prescription from their ASL

STEP 4

Pharmacist views ASL

Pharmacist views the patient's ASL, selects eScript(s) to be filled and queues them in Minfos eQueue

STEP 5

Dispense eScript(s)

From Minfos eQueue the pharmacist can dispense the requested eScript(s)

STEP 6

Update patient's ASL

Any remaining eScript repeats are automatically uploaded to the patient's ASL*

ASL access

Primary Contact

The patient or carer controls who has access to the patient's ASL and for how long

Ongoing access

The Primary Contact can provide your pharmacy with ongoing access to the patient's ASL

Require access

Pharmacy needs consent to access the patient's ASL

Exemption

*Some states / territories prohibit certain scripts from being uploaded to a patient's ASL

Encourage your patient to get their prescriptions prescribed as eScripts so that you can simply access them from their ASL
